User Scenarios

A, to a strange place, I do not know whether there is parking nearby or not? Many developed app aimed to solve this problem, that is, to provide users with information on nearby parking, but this is not good to do a lot and are not included the parking information within area near, just display parking information offices and other places;

B, to a large number of vehicles in place, no place to park. In a special holiday, parking are hard to find, finding a parking lot within 300 meters near the building is tight, the user usually continue to wait or temporary park on roadside.

C, metro station or a place to work, this scenario monthly users typically want to form, the price is relatively cheap. The current parking app are not related to this one.

D, nearby parking, but too expensive, inexpensive place nearby is often full of parked. Under this scenario, the current parking app are not an effective solution.
